

## RS 6108 VHF BASE STATION FOR GROUND TO AIR COMMUNICATION

The RS 6108 stationary transceiver has been designed to be installed as main transceiver for secondary airfields or stand - by system for major airports. It operates in 800 channels within 118 - 138 MHz band. A N - Vol memory for 10 channels makes channeling simple and quick. High receiver sensitivity, 7 W transmitter output and no risk when 220V mains supply fails - battery supply is automatically switched on - make it really reliable. Cassette recorder output socket for automatic correspondence recording is provided and there is possibility for external speaker / 4 + 8 ohm / connection. The transmitter - receiver unit meets the RTCA DO 156, DO 157 and DO 160 Env.Cat. DA J / N BAA.
