

RS 6105 M VHF COMM TRANSCEIVER

The RS 6105M represents a 25 kHz spacing VHF remote control comm transceiver designed for a wide range of general aviation aircraft including helicopters. The RS 6105M provides air to ground AM communication within the range from 118 to 137,97 MHz. The transceiver incorporates the built-in intercom system providing communication between pilot and co-pilot without additional accessories. The RS 6105M provides 800 operating channels accessed by keyboard frequency selection. 10 presettable channels stored in a non-volatile memory makes channeling simple and quick. The selected operating frequency is displayed by an electronic digital readout dimmed automatically according to the cockpit ambient light level.
