

PORTABLE RADIOSTATION FOR LIFEBOATS AND LIFE RAFTS RS 103

The portable radiostation for lifeboats and life rafts is designed for two-way communication during rescue actions at sea. It meets the requirements of the International Convention for Safety of Life at Sea. The RS 103 complies with the MPT rules. The radiostation is completely transistored. Accompanied by minimum but indispensable HF tuned circuits, they guarantee highly reliable operation. The devices are accommodated in solid but light housing of polyester-glass laminates, which is fully water-proof, keeping a single man afloat. The shape of the housing enables convenient fastening of the radiostation to the operator. The RS 103 may be used both on lifeboats or pneumatic rafts.
